

COMPREHENSIVE SERVICES

We offer competitive repair and calibration services, as well as easily accessible documentation and free downloadable resources.

SELL YOUR SURPLUS

We buy new, used, decommissioned, and surplus parts from every NI series. We work out the best solution to suit your individual needs.

 Sell For Cash  Get Credit  Receive a Trade-In Deal

OBSOLETE NI HARDWARE IN STOCK & READY TO SHIP

We stock **New**, **New Surplus**, **Refurbished**, and **Reconditioned** NI Hardware.

Bridging the gap between the manufacturer and your legacy test system.

What You Need to Get Started

You need the following items to get started.

Hardware

- ☐ NI 9512 C Series stepper drive interface module.
- ☐ NI Real-Time controller.
 - CompactRIO controller and chassis that support the RIO Scan Interface.
 - or
 - NI 9146, 9147, 9148, or 9149 Ethernet RIO Expansion Chassis.
 - or
 - NI 9144 distributed chassis and compatible RT controller.
- ☐ +24 V power supply (such as the NI PS-15) for the CompactRIO controller (NI part number 781093-01)
- ☐ Separate +24 V power supply for the NI 9512 (such as the NI PS-15)
- ☐ NI PS-12 (+24 V) or NI PS-13 (+48 V) power supply for the NI integrated stepper

Note The power supply required for your application will depend on the torque and speed requirements, as well as the motor used. Refer to the product data sheet to help choose a suitable power supply.

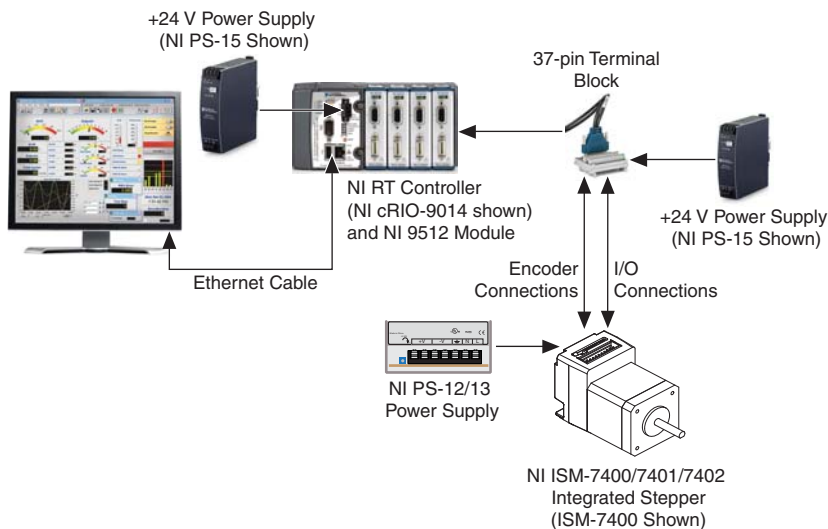

- ☐ Ethernet connection and cable for the CompactRIO controller or Ethernet RIO Expansion Chassis.
- ☐ NI 951x Cable and Terminal Block bundle (NI part number 780553-01).
- ☐ NI ISM-7400/7401/7402 integrated stepper.

Software

- ☐ LabVIEW 2010 (minimum).
- ☐ LabVIEW 2010 Real-Time Module (minimum).
- ☐ LabVIEW 2010 NI SoftMotion Module (minimum).
- ☐ NI-RIO 3.5.0 (minimum).

Figure 1 shows the required hardware and software.

Figure 1. NI 9512 to NI ISM Connections

Hardware Installation and Configuration

This section covers the hardware setup for the Real Time system, NI 9512 C Series module, and NI ISM-7400/7401/7402 integrated stepper.

Step 1: Set Up the Real Time System

Complete the following steps to set up the Real Time system depending on your hardware

1. Refer to the Getting Started guide included with the Real-Time controller to assemble it, connect it to power, discover it on the network, and install the software in NI MAX.
2. Install the NI 9512 module in an available slot that supports High Speed Interface (HSI) in your chassis.

Note Older model chassis, such as cRIO-902x, cRIO-907x, cRIO-908x, NI 9144, and NI 9148, have HSI support on slots 1 through 4. Refer to your chassis documentation for more information about HSI slot support.

Step 2: Connect the NI 9512 to the 37-Pin Terminal Block

1. Connect the MDR and DSUB connectors on the NI 951x Y-cable to the MDR and DSUB connectors on the NI 9512 module.
2. Connect the 37-pin DSUB to the DSUB connector on the NI 951x terminal block.

Figure 2 shows the 37-pin terminal block pin assignments.

Figure 2. NI 9512 37-Pin Terminal Block Pin Assignments

Forward Limit				Digital Output 1 [†]
Home				Reverse Limit
COM				Reserved
Digital Input 0				V _{sup}
COM				Reserved
Encoder 0 Index+				COM
Encoder 0 Index-				Encoder 0 Phase A+
COM				Encoder 0 Phase A-
+5V OUT				Encoder 0 Phase B+
Position Compare				Position Capture
Reserved				Encoder 0 Phase B-
Reserved				Reserved
Digital Output 0 [†]				Reserved
V _{sup} [†]				COM [†]
Digital Input 1 [†]				Drive Enable [†]
Direction (CCW)+ [†]				Digital Input 3 [†]
COM [†]				Direction (CCW)- [†]
Step (CW)+ [†]				Digital Input 2 [†]
Shield				Step (CW)- [†]

[†] Indicates DSUB connector signals.

Step 3: Connect the 37-Pin Terminal Block to the +24 V Power Supply

1. Connect the V+ terminal from the 24 V power supply to one of the two V_{sup} inputs on the 37-pin terminal block. The 37-pin terminal block provides a V_{sup} input for the NI 9512 on pin 14 and pin 22.
2. Connect the V- terminal from the 24 V power supply to one of the COM terminals on the 37-pin terminal block. The 37-pin terminal block provides COM on pins 3, 5, 8, 17, 24, and 32.

Step 4: Connect the Drive Command Signals

The NI ISM-7400/7401/7402 integrated steppers support both single-ended and differential stepper commands. This document provides instruction for single-ended connection only.

- 1. Connect the integrated stepper Step- wire (brown) to the 37-pin terminal block Step (CW)+ terminal (pin 18).
- 2. Connect the integrated stepper Dir- wire (green) to the 37-pin terminal block Direction (CCW)+ terminal (pin 16).
- 3. Connect the integrated stepper Step+ wire (orange) and Dir+ wire (yellow) to the 37-pin terminal block +5V OUT terminal (pin 9).

Step 5: Connect the Drive Enable Signal

Complete the following steps to connect the Drive Enable signal, which controls the enable function of the drive:

- 1. Connect the En- wire (purple) to the 37-pin terminal block COM terminal (pin 5).
- 2. Connect the En+ wire (blue) to the 37-pin terminal block Drive Enable terminal (pin 33).

Step 6: (Optional) Connect the Drive Fault Signal

Complete the following steps to map an NI 9512 digital input to the Out signal to monitor the NI integrated stepper for faults:

- 1. Connect the Out+ wire (grey) to the 37-pin terminal block Vsup terminal (pin 22).
- 2. Connect the Out- wire (white) to the 37-pin terminal block DI 0 terminal (pin 4).

Note If you do not connect the Out+ and Out- signals to the 37-pin terminal block, insulate the wires.

Step 7: Connect the Encoder Signals

If your NI ISM includes an encoder, connect the encoder cable to the integrated stepper using the included connector, and connect the encoder wires to the 37-pin terminal block as indicated in Table 1.

Table 1. NI ISM to 37-Pin Terminal Block Connections

NI ISM Signal Name	Wire Color	37-Pin Terminal Block Pin Number	37-Pin Terminal Block Signal Name
A	blue	25	Encoder 0 Phase A+
\overline{A}	blue/white	26	Encoder 0 Phase A-
B	brown	27	Encoder 0 Phase B+
\overline{B}	brown/white	29	Encoder 0 Phase B-

Table 1. NI ISM to 37-Pin Terminal Block Connections (Continued)

NI ISM Signal Name	Wire Color	37-Pin Terminal Block Pin Number	37-Pin Terminal Block Signal Name
I	orange	6	Encoder 0 Index+
\bar{I}	orange/white	7	Encoder 0 Index-
GND	green/white	8	COM
+5V	green	9	+5V OUT

Step 8: Connect the NI PS-12/13 Power Supply

Note Do not plug in or turn on the power supply until you complete [Step 11: Power on the Drive and Verify Connections](#).

Complete the following steps to connect the power supply to AC input power and to the NI integrated stepper. Figure 3 shows the power supply terminals.

Figure 3. NI PS-12/13 Power Supply Terminals

- | | |
|---|--------------------|
| 1 +24 V (NI PS-12) or +48 V (NI PS-13) Output | 4 AC Input Neutral |
| 2 +24 V (NI PS-12) or +48 V (NI PS-13) Ground | 5 AC Input Line |
| 3 AC Input Ground (Protective Earth) | |

1. Connect an AC input cable to the line, neutral, and ground (protective earth) connectors.
2. Connect the integrated stepper V+ (red) wire to the power supply +V connector.
3. Connect the integrated stepper V- (black) wire to the power supply -V connector.
4. Connect the NI 9512 COM to the NI PS-12/13 -V terminal to ensure a common reference.

Step 9: Configure the NI ISM-7400/7401/7402 DIP Switches

The NI ISM-7400/7401/7402 integrated steppers provide drive configuration DIP switches. Figure 4 shows the DIP switch location and functions.

Note If you change the DIP switch settings you must power cycle the NI ISM for the new settings to take effect.

Figure 4. NI ISM-7400/7401/7402 DIP Switches

Refer to Table 2 for the DIP switch settings that this document uses.

Table 2. DIP Switch Settings

Setting Name	Switch Position	Corresponding Value
Running Current		100%
Idle Current		50%
Self Test		Off

Table 2. DIP Switch Settings (Continued)

Setting Name	Switch Position	Corresponding Value
Step Noise Filter		2 MHz
Step Smoothing Filter		Off
Load Inertia		0 - 4X
Step Pulse Type		Step/Dir
Step Size		25000

Step 10: Cut Off and Insulate the NC Wire

The NC wire on the NI ISM-7400/7401/7402 is unused. NI recommends removing and insulating this wire for optimal operation.

1. Cut off the NC wire.
2. Insulate the end of the wire if there is any exposed metal remaining.

Step 11: Power on the Drive and Verify Connections

After all hardware connections have been made complete the following steps to confirm the hardware setup.

1. Turn on all power supplies.
2. Verify that the Drive Status LED on the NI ISM flashes or is solid green. Figure 5 shows the location of the Drive Status LED.

Figure 5. Drive Status LED Location

If the Drive Status LED does not flash or turn solid green, turn off all power, verify the connections, and try again.

Software Installation and Configuration

This section covers installing and configuring software for the NI 9512 C Series module.

Note These instructions assume you have installed all required software from the [What You Need to Get Started](#) section on your development machine.

Step 1: Install Software on and Configure the NI RT Controller

Complete the following steps to configure the controller and install software on it.

1. Launch Measurement & Automation Explorer (MAX) on the development computer by clicking the MAX icon on the desktop, or by selecting **Start»All Programs»National Instruments»NI MAX**.
2. Select the controller under **Remote Systems** in the **Configuration** pane. If you do not see the controller, you may need to disable the firewall on the development computer.
3. Verify that the **Serial Number** in the **Identification** section matches the serial number on the device.
4. Expand the controller item in the tree, right-click **Software**, and select **Add/Remove Software**.

5. Select a recommended software set that includes NI-RIO 2014 (minimum) with NI Scan Engine Support.
6. Click **Next** and enable the following add-ons:
 - LabVIEW SoftMotion Module
 - NI Industrial Communications for EtherCAT if using the NI 9144.
7. Click **Next** to install the selected software on the controller. Click **Help** if you need information about installing recommended software sets.
8. Close MAX.

Step 2: Create a Project and add NI RT Controller

Complete the following steps to create a LabVIEW project.

1. Launch LabVIEW by selecting **Start»All Programs»National Instruments»LabVIEW**.
2. Click the **Empty Project** link in the **Getting Started** window to display the **Project Explorer** window. You can also select **File»New Project** to display the **Project Explorer** window.
3. Select **Help** and make sure that **Show Context Help** is checked. You can refer to the context help throughout the tutorial for information about items on the block diagram.

Depending on the hardware configuration being used, continue to the following respective sections.

A. CompactRIO Controller

If you are using a CompactRIO controller, complete the following steps to add the device to the project and detect the C Series modules.

1. Right-click the top-level project item in the **Project Explorer** window and select **New»Targets and Devices** from the shortcut menu to display the **Add Targets and Devices** dialog box.
2. Make sure that the **Existing target or device** radio button is selected.
3. Expand **Real-Time CompactRIO**.
4. Select the CompactRIO controller to add to the project and click **OK**.
5. If you have LabVIEW FPGA installed, the **Select Programming Mode** dialog box appears. Select **Scan Interface** to put the system into Scan Interface mode.

Tip Use the **CompactRIO Chassis Properties** dialog box to change the programming mode in an existing project. Right-click the CompactRIO chassis in the **Project Explorer** window and select **Properties** from the shortcut menu to display this dialog box.

6. Click **Discover** in the **Discover C Series Modules?** dialog box if it appears.
7. Click **Continue**.

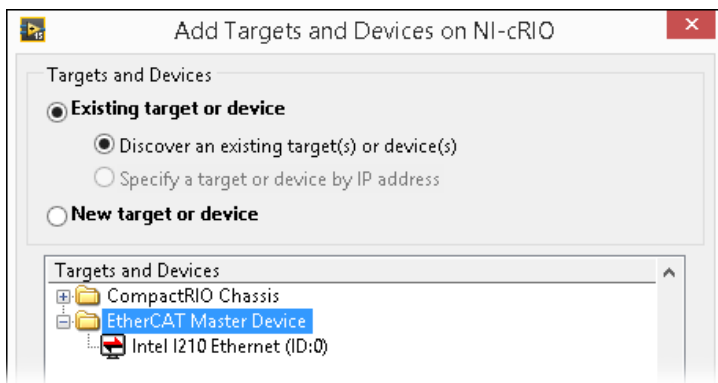

8. Right-click the controller item in the **Project Explorer** window and select **Properties** from the shortcut menu to display the **RT Target Properties** dialog box. Select **Scan Engine** from the **Category** list to display the Scan Engine page.
9. Set the **Scan Period** to 5 ms or lower.
10. Click **OK** to close the **RT Target Properties** dialog box.

B. EtherCAT Master and NI 9144 EtherCAT Expansion Chassis

If you are using the NI 9144 chassis, complete the following steps to add the EtherCAT master device and detect the C Series module.

1. Add the Master Real Time Controller to the project. Right click the top level project item in the **Project Explorer** window and select **New»Targets and Devices** from the shortcut menu to display the **Add Targets and Devices** dialog box.
2. Make sure that **Existing target or device** radio button is selected.
3. Expand the folder that corresponds to the device you are adding, such as Real Time Industrial Controller, Real Time PXI, and so on.
4. Select Real Time to add to the project and click **OK**.
5. In the LabVIEW **Project Explorer** window, right-click the master controller and select **New»Targets and Devices**.
6. In the **Add Targets and Devices** dialog window shown in Figure 6, select **Existing target or device** and expand the category EtherCAT Master Device to auto-discover the EtherCAT port on the master controller. An EtherCAT master device and modules can be added manually at any time.

Figure 6. Adding the EtherCAT Master

When all the slave devices are discovered, the LabVIEW **Project Explorer** window lists each slave device and any installed C Series modules.

C. NI 9146/7/8/9 Ethernet RIO Expansion Chassis

Complete the following steps to add the device to the project and detect the C Series modules if the NI 9146/7/8/9 Ethernet RIO Expansion chassis is being used.

1. Right-click the top-level project item in the **Project Explorer** window and select **New» Targets and Devices** from the shortcut menu to display the **Add Targets and Devices** dialog box.
2. Make sure that the **Existing target or device** radio button is selected.
3. Expand **Ethernet RIO**.
4. Select the Ethernet RIO expansion chassis to add to the project and click **OK**.
5. If you have LabVIEW FPGA installed, the **Select Programming Mode** dialog box appears. Select **Scan Interface** to put the system into Scan Interface mode.

Tip Use the **Chassis Properties** dialog box to change the programming mode in an existing project. Right-click the chassis in the **Project Explorer** window and select **Properties** from the shortcut menu to display this dialog box.

6. Click **Discover** in the **Discover C Series Modules?** dialog box if it appears.
7. Click **Continue**.
8. Right-click the controller item in the **Project Explorer** window and select **Properties** from the shortcut menu to display the **Ethernet RIO Properties** dialog box. Select **Scan Engine** from the **Category** list to display the Scan Engine page.
9. Set the **Scan Period** to 5 ms or lower.
10. Click **OK** to close the **Ethernet RIO Properties** dialog box.

Step 3: Add a SoftMotion Axis to the Project

Complete the following steps to create a LabVIEW project and add a SoftMotion Axis to it.

1. Right-click the controller item in the **Project Explorer** window and select **New» NI SoftMotion Axis** from the shortcut menu to open the **Axis Manager** dialog box, shown in Figure 7.
2. Click **Add New Axis** to create an NI SoftMotion axis associated with the NI 9512 module. Axes are automatically bound to an available module. You can double-click the axis name to rename the axis and give it a descriptive name.

Figure 7. Axis Manager Dialog Box

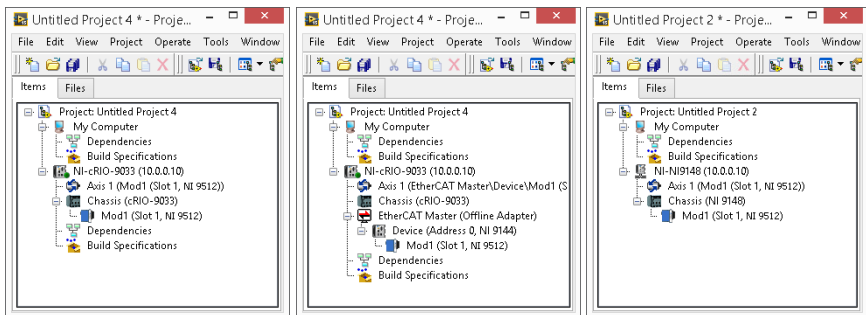

3. Click **OK** to close the **Axis Manager** dialog box. The new axis is added to the **Project Explorer** window.

Note You cannot associate more than one axis with the same C Series module.

When you have finished these steps your LabVIEW project should look similar to the image in Figure 8.

Figure 8. Project Explorer Windows with Modules in Scan Interface Mode

Step 4: Configure the NI 9512 Axis

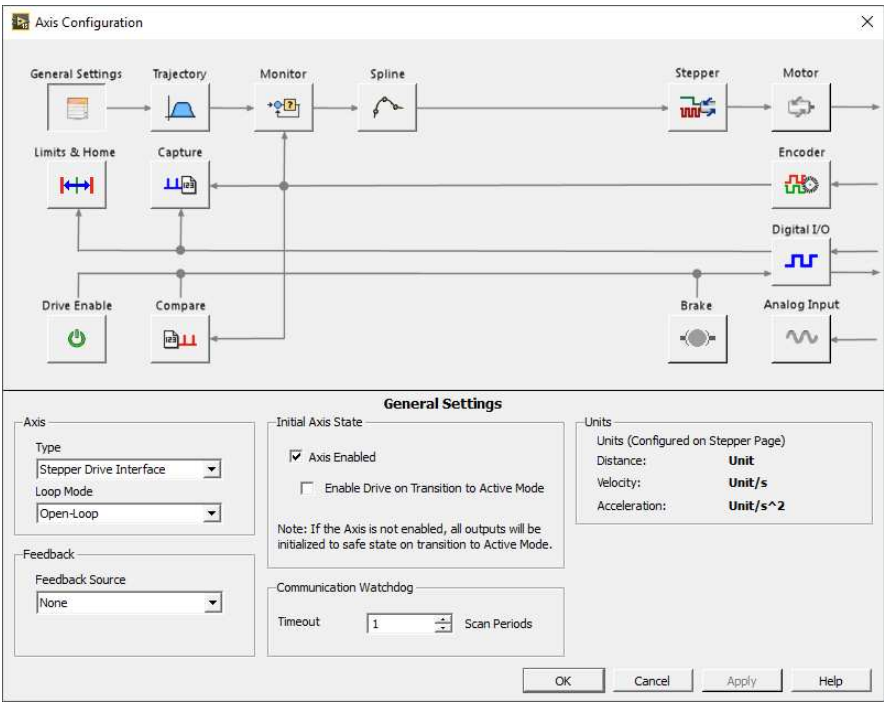

Complete the following steps to configure the axis I/O settings for use with the NI ISM integrated stepper.

1. Right-click the axis in the **Project Explorer** window and select **Properties** from the shortcut menu to open the **Axis Configuration** dialog box.

Note The **Axis Configuration** dialog box user interface may not match this image exactly depending on which version of the LabVIEW NI SoftMotion Module you are using.

Figure 9. Axis Configuration Dialog Box

2. Configure the following settings on the **General Settings** page ().
 - a. Confirm that **Loop Mode** is set to **Open-Loop**. Axes configured in open-loop mode produce step outputs but do not require feedback from the motor to verify position.
 - b. Set **Feedback Source** to **Encoder 0**, if you have connected an encoder, or **None** if you do not have an encoder connected.
 - c. Confirm that the **Axis Enabled** and **Enable Drive on Transition to Active Mode** checkboxes contain checkmarks. These selections configure the axes to automatically activate when the NI Scan Engine switches to Active mode.

Note Disable these options to prevent axes from automatically activating when the NI Scan Engine switches to Active mode.

3. If you have connected an encoder, click the Encoder button () and configure the Units and Counts Per Unit.
 - a. In the **Active State** section set the **Line State** for **A**, **B**, and **Index** to **High**.
 - b. In the **Index Reference Criteria** section set the **Line State** for **A** and **B** to **Inactive**.
 - c. Select **rev** from the **Units** text box, or type **revolutions** if you prefer.
 - d. Set the **Counts per rev** to 8,000. This setting is the encoder resolution in quadrature counts per revolution and corresponds to the encoder lines per revolution multiplied by four.

Note The counts per revolution should be set accordingly if a dual shaft model of Integrated Stepper Motor with a third party Encoder is being used.

When you are finished the Encoder Settings page will look similar to Figure 10.

Figure 10. Axis Configuration Encoder Page

4. Click the **Stepper** button () to open the **Stepper** page.
 - a. Ensure that the Stepper Output settings match the following:
 - **Output Mode**—Step and Direction
 - **Output Type**—Single-Ended
 - **Active State**— Low
 - b. Configure the Units and Steps Per Unit.
 - Select **rev** from the **Units** text box, or type **revolutions** if you prefer.
 - Set **Steps Per revolution** to 25,000.

Note The **Steps Per revolution** setting *must* match the Steps/Rev DIP switch setting. If you change the Steps/Rev setting using the DIP switches, update this setting to match.

- c. (Optional) Click the **Monitor** button () and make the following changes to enable NI SoftMotion to disable the drive and turn off the Drive Enable signal when the specified position error limit is exceeded.

Note The **Monitor** button is greyed out if **Feedback Source** on the **Axis Settings** page is set to **None**.

- Enable the **Enforce Position Error Limit** checkbox.
 - Set **Position Error Limit** to a reasonable tolerance for your system, such as 1.
5. Click the **Drive Enable** button () and ensure that the Drive Enable settings match the following:
 - **Output Type**—Sourcing
 - **Active State**—Off
 - **Safe State**—On
 6. If you connected the Out+/Out- signal, click the Digital I/O button () and complete the following steps to configure the DI 0 signal:
 - a. Double-click the text in the **Mapping** column and select **Drive Fault/Alarm** from the dropdown list.
 - b. Ensure that the DI 0 settings match the following:
 - **Input Type**—Sinking
 - **Active State**—On
 - **Digital Filter**—50 μ s
 7. Complete the following additional steps if you do not have limits and home connected at this time:
 - a. Click the **Limits & Home** button ().
 - b. In the **Forward Limit** and **Reverse Limit** sections ensure that the settings match the following:

Note These configuration settings disable limits for initial setup and testing purposes. National Instruments recommends connecting and enabling limits in your final application.

- Clear the **Enable** checkbox from both **Forward Limit** and **Reverse Limit**.
 - Set the **Active State** for both **Forward Limit** and **Reverse Limit** to **Off**. This prevents a limit warning even though limits are turned off.
- c. Open the **Home** section and clear the **Enable** checkbox.
8. Configure any additional I/O settings according to your system requirements, such as position compare or position capture signals.
 9. Click **OK** to close the **Axis Configuration** dialog box.

10. Right-click the controller item in the **Project Explorer** window and select **Deploy All** to deploy the axis information. If a conflict resolution dialog box appears, click **Apply** to proceed with deployment.
11. Select **File»Save Project** to save the project.

Step 5: Enable and Test the Drive Using LabVIEW

Use the Interactive Test Panel to test and debug your motion system and configuration settings on the selected axis. With the Interactive Test Panel you can perform a simple straight-line move, monitor feedback position and position error information, I/O and move status information, change move constraints, get information about software errors and faults, and view position or velocity plots of the move.

Complete the following steps to test your setup after configuring the axis using the **Axis Configuration** dialog box.

1. Right-click the axis in the **Project Explorer** window and select **Interactive Test Panel** from the shortcut menu. Opening this dialog box sends the axis settings to the hardware and activates the I/O on the module.
2. On the **Move** tab set **Move Mode** to Relative Position and **Target Position** to 10 rev.
3. On the **Move Constraints** tab set **Velocity** to 2 rev/sec, **Acceleration** and **Deceleration** to 20 rev/sec², and **Acceleration Jerk** and **Deceleration Jerk** to 200 rev/sec³. Using the encoder counts per revolution and stepper steps per revolution values specified in this tutorial the motor will move 10 revolutions at 120 rpm.

Tip Click the **Help** button (?) on the bottom of the dialog box for detailed information about the items available in this dialog box.

4. Click the **Enable** button () on the bottom of the dialog box to enable the drive.
5. Click the **Start** button () on the bottom of the dialog box to start the move with the configured options.
6. Use the **Status** and **Plots** tabs to monitor the move while it is in progress.

Finalize your motion system setup by connecting and configuring additional I/O such as limits as required by your system using the 37-pin terminal block.

Where To Go From Here

The following documents contain additional information that you may find helpful. All referenced documents ship with the product and are available at ni.com/manuals.

- Operating instructions for the controller and C Series module.
- *NI ISM-7400 User Manual* or *NI ISM-7401/7402 User Manual*
- *LabVIEW NI SoftMotion Module Help*—Use this help file to learn about using the NI SoftMotion Module in LabVIEW including information about function blocks and using the NI SoftMotion Module with the LabVIEW Project. To access this help file from LabVIEW, select **Help»LabVIEW Help**, then expand the *LabVIEW NI SoftMotion Module* book on the **Contents** tab.
- *LabVIEW Help*—Use the *LabVIEW Help* to access information about LabVIEW programming concepts, step-by-step instructions for using LabVIEW, and reference information about LabVIEW VIs, functions, palettes, menus, tools, properties, methods, events, dialog boxes, and so on. The *LabVIEW Help* also lists the LabVIEW documentation resources available from National Instruments. Access the *LabVIEW Help* by selecting **Help»LabVIEW Help**.
- *SoftMotion Examples*—After the configuration and testing of the motion system is complete, use SoftMotion API to program the motion control application in LabVIEW. Access the SoftMotion Examples by selecting **Help»Find Examples»Hardware Input and Output»Motion Control»SoftMotion**.

Worldwide Support and Services

The National Instruments Web site is your complete resource for technical support. At ni.com/support you have access to everything from troubleshooting and application development self-help resources to email and phone assistance from NI Application Engineers.

Visit ni.com/services for NI Factory Installation Services, repairs, extended warranty, calibration, and other services.

Visit ni.com/register to register your National Instruments product. Product registration facilitates technical support and ensures that you receive important information updates from NI.

A Declaration of Conformity (DoC) is our claim of compliance with the Council of the European Communities using the manufacturer's declaration of conformity. This system affords the user protection for electromagnetic compatibility (EMC) and product safety. You can obtain the DoC for your product by visiting ni.com/certification. If your product supports calibration, you can obtain the calibration certificate for your product at ni.com/calibration.

National Instruments corporate headquarters is located at 11500 North Mopac Expressway, Austin, Texas, 78759-3504. National Instruments also has offices located around the world to help address your support needs. For telephone support in the United States, create your service request at ni.com/support and follow the calling instructions or dial 512 795 8248. For telephone support outside the United States, visit the Worldwide Offices section of ni.com/niglobal to access the branch office Web sites, which provide up-to-date contact information, support phone numbers, email addresses, and current events.
