

COMPREHENSIVE SERVICES

We offer competitive repair and calibration services, as well as easily accessible documentation and free downloadable resources.

SELL YOUR SURPLUS

We buy new, used, decommissioned, and surplus parts from every NI series. We work out the best solution to suit your individual needs.

 Sell For Cash  Get Credit  Receive a Trade-In Deal

OBSOLETE NI HARDWARE IN STOCK & READY TO SHIP

We stock **New**, **New Surplus**, **Refurbished**, and **Reconditioned** NI Hardware.

Bridging the gap between the manufacturer and your legacy test system.

PCI-6542

SPECIFICATIONS

PCI-6542

100 MHz, 32-Channel Digital Waveform Device

These specifications apply to the PCI-6542 with 1 MBit, 8 MBit, and 64 MBit of memory per channel.

Hot Surface If the PCI-6542 has been in use, it may exceed safe handling temperatures and cause burns. Allow the PCI-6542 to cool before removing it from the chassis.

Note All values were obtained using a 1 m cable (SHC68-C68-D4 recommended). Performance specifications are not guaranteed when using longer cables.

Definitions

Warranted specifications describe the performance of a model under stated operating conditions and are covered by the model warranty.

The following characteristic specifications describe values that are relevant to the use of the model under stated operating conditions but are not covered by the model warranty.

- *Typical* specifications describe the performance met by a majority of models.
- *Nominal* specifications describe an attribute that is based on design, conformance testing, or supplemental testing.

Specifications are *Typical* unless otherwise noted.

Conditions

Typical values are representative of an average unit operating at room temperature.

Channels

Data

Number of channels	32
Direction control	Per channel

Programmable Function Interface (PFI)

Number of channels	4
Direction control	Per channel

Clock terminals

Input	3
Output	2

Generation Channels

Channels	Data DDC CLK OUT PFI <0..3>
Signal type	Single-ended

Table 1. Voltage Levels, I = 100 μ A

Logic family, into 1 M Ω	Low		High	
	Typical	Maximum	Minimum	Typical
1.8 V	0 V	0.1 V	1.7 V	1.8 V
2.5 V			2.4 V	2.5 V
3.3 V TTL (5 V TTL compatible)			3.2 V	3.3 V

Output impedance	50 Ω , nominal
Maximum DC drive strength, by logic family	
1.8 V	\pm 8 mA
2.5 V	\pm 16 mA
3.3 V	\pm 32 mA
Data channel driver enable/disable control	Software-selectable: per channel
Channel power-on state ¹	Drivers disabled, 50 k Ω input impedance
Output protection	
Range	0 V to 5 V
Duration	Indefinite

Acquisition Channels

Channels	Data STROBE PFI <0..3>
Signal type	Single-ended

¹ For module assemblies C and later. Module assemblies A and B have an input impedance of 10 k Ω .

Table 2. Voltage Levels

Logic family	Maximum Low Threshold	Minimum High Threshold
1.8 V	0.45 V	1.35 V
2.5 V	0.75 V	1.75 V
3.3 V TTL (5 V TTL compatible)	1.00 V	2.30 V
Input impedance ²	50 k Ω	
Input protection range ³	-1 V to 6 V	

Timing

Sample Clock

Sources

1. On Board clock (internal voltage-controlled crystal oscillator [VCXO] with divider)
2. CLK IN (SMB jack connector)
3. STROBE (Digital Data & Control [DDC] connector; acquisition only)

Frequency range

On Board clock	48 Hz to 100 MHz, Configurable to 200 MHz/ N ; $2 \leq N \leq 4,194,304$
CLK IN	20 kHz to 100 MHz
STROBE	48 MHz to 100 MHz

Relative delay adjustment⁴

Range	0.0 to 1.0 Sample clock periods
Resolution	10 ps

Exported Sample clock

Destinations ⁵	1. DDC CLK OUT (DDC connector) 2. CLK OUT (SMB jack connector)
---------------------------	---

² For module assemblies C and later. Module assemblies A and B have an input impedance of 10 k Ω .

³ Diode clamps in the design may provide additional protection outside the specified range.

⁴ You can apply a delay or a phase adjustment to the On Board clock to align multiple devices.

⁵ Sample clocks with sources other than STROBE can be exported.

Delay (δ_C), for clock frequencies ≥ 25 MHz

Range	0.0 to 1.0 Sample clock periods
Resolution	1/256 of Sample clock period
Jitter, using On Board clock	
Period	20 ps _{rms} , typical
Cycle-to-cycle	35 ps _{rms} , typical

Generation Timing

Channels	Data DDC CLK OUT PFI <0..3>
Data channel-to-channel skew	± 600 ps, typical
Maximum data channel toggle rate	50 MHz
Data position modes	Sample clock rising edge Sample clock falling edge Delay from Sample clock rising edge
Generation data delay (δ_G), for clock frequencies ≥ 25 MHz	
Range	0.0 to 1.0 Sample clock periods
Resolution	1/256 of Sample clock period
Exported Sample clock offset (t_{CO})	Software-selectable: 0.0 ns or 2.5 ns (default)
Time delay from Sample clock (internal) to DDC connector (t_{SCDDC})	15 ns, typical

Table 3. Generation Provided Setup and Hold Times

Exported Sample Clock Mode and Offset	Voltage Family	Time from Rising Clock Edge to Data Transition (t_{PCO})	Minimum Provided Setup Time (t_{PSU})	Minimum Provided Hold Time (t_{PH})
Noninverted, 2.5 ns	1.8 V	2.5 ns, typical	$t_p - 5.5$ ns	0.5 ns
	2.5 V		$t_p - 4.5$ ns	0.9 ns
	3.3 V/5.0 V		$t_p - 4.5$ ns	1 ns

Table 3. Generation Provided Setup and Hold Times (Continued)

Exported Sample Clock Mode and Offset	Voltage Family	Time from Rising Clock Edge to Data Transition (t_{PCO})	Minimum Provided Setup Time (t_{PSU})	Minimum Provided Hold Time (t_{PH})
Inverted, 0 ns	1.8 V	$t_p/2$	$t_p/2 - 3.5$ ns	$(t_p/2) - 1.5$ ns
	2.5 V		$t_p/2 - 2.5$ ns	
	3.3 V/5.0 V		$t_p/2 - 2$ ns	

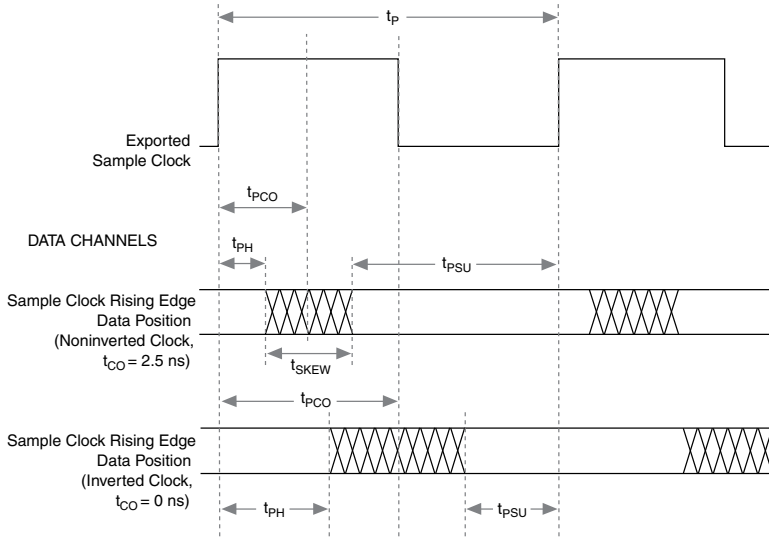

Note Provided setup and hold times account for maximum channel-to-channel skew and jitter.

The table values provided assume the following data position is set to Sample clock rising edge and the Sample clock is exported to the DDC connector and includes worst-case effects of channel-to-channel skew, inter-symbol interference, and jitter. Other combinations of exported Sample clock mode and offset are also allowed. The values presented are from the default case (noninverted clock with 2.5 ns offset) and for providing balanced setup and hold times (inverted clock with 0 ns offset).

To determine the appropriate exported Sample clock mode and offset for your PCI-6542 generation session, compare the setup and hold times from the datasheet of your device under test (DUT) to the values in this table. Select the exported Sample clock mode and offset such that the PCI-6542 provided setup and hold times are greater than the setup and hold times required for the DUT.

Specified timing relationships apply at the DDC connector and at high-speed DIO accessory terminals. Any signal routing, clock splitting, buffers, or translation logic can impact this relationship. If multiple copies of DDC_CLK_OUT are necessary, use a zero buffer to preserve this relationship.

Figure 1. Generation Provided Setup and Hold Times Timing Diagram

$$t_p = \frac{1}{f} = \text{Sample Clock Period}$$

t_{PH} = Minimum Provided Hold Time

t_{PSU} = Minimum Provided Set-Up Time

t_{PCO} = Time from Rising Clock Edge to Data Transition (Provided Clock to Out Time)

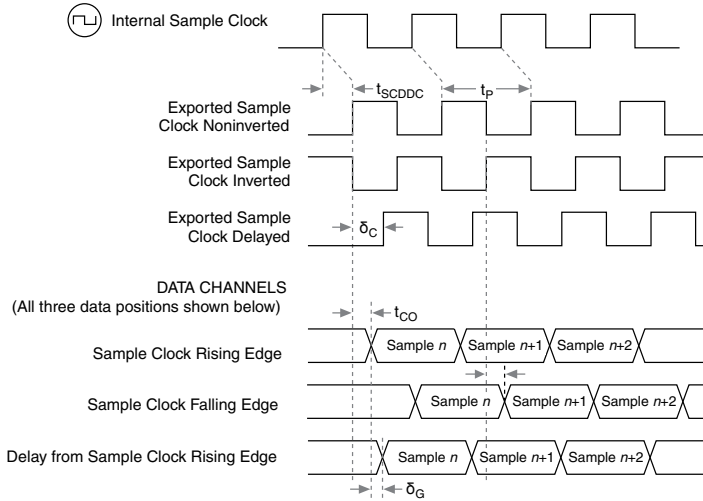

t_{CO} = Exported Sample Clock Offset

t_{SKEW} = Maximum Channel-to-Channel Skew and Clock Uncertainty

Note Provided setup and hold times account for maximum channel-to-channel skew and jitter.

Figure 2. Generation Timing Diagram

t_{SCDDC} : Time Delay from Internal Sample Clock to DDC Connector Exported Sample Clock

$0 \leq \delta_C \leq 1$: Exported Sample Clock Delay (fraction of t_P)

$0 \leq \delta_G \leq 1$: Generation Data Delay (fraction of t_P)

$$t_P = \frac{1}{f} = \text{Sample Clock Period}$$

t_{CO} = Exported Sample Clock Offset; 0 or 2.5 ns, software-selectable

Acquisition Timing

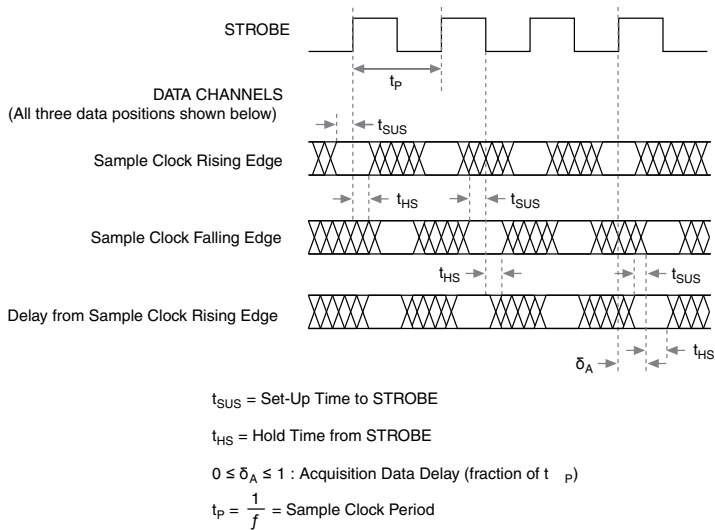

Channels	Data STROBE PFI <0..3>
Channel-to-channel skew	±600 ps, typical
Data position modes	Sample clock rising edge Sample clock falling edge Delay from Sample clock rising edge
Setup and hold times	
To STROBE ⁶	
Setup time (t_{SUS})	3.1 ns, maximum
Hold time (t_{HS})	2.7 ns, maximum

⁶ Includes maximum data channel-to-channel skew.

To Sample clock⁷

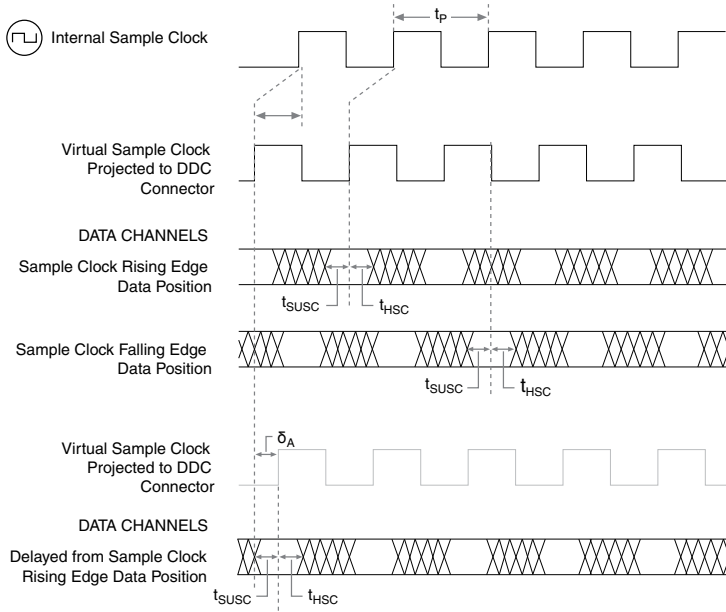

Setup time (t_{SUSC})	0.4 ns
Hold time (t_{HSC})	0 ns
Time delay from DDC connector data to internal Sample clock (t_{DDCSC})	10 ns, typical
Acquisition data delay (δ_A), for clock frequencies ≥ 25 MHz	
Range	0.0 to 1.0 Sample clock periods
Resolution	1/256 of Sample clock period

Figure 3. Acquisition Timing Diagram Using STROBE as the Sample Clock

⁷ Does not include data channel-to-channel skew, t_{DDCSC} , or t_{SCDDC} .

Figure 4. Acquisition Timing Diagram with Sample Clock Sources Other than STROBE

t_{DCSC} : Time Delay from DDC Connector to Internal Sample Clock

$0 \leq \delta_A \leq 1$: Acquisition Data Delay (fraction of t_p)

$t_p = \frac{1}{f}$ = Period of Sample Clock

t_{SUSC} = Set-Up Time to Sample Clock

t_{HSC} = Hold Time to Sample Clock

CLK IN

Connector	SMB jack
Direction	Input
Signal type	Single-ended
Destinations	1. Reference clock for the phase-locked loop (PLL) 2. Sample clock
Input coupling	AC
Input protection	± 10 VDC
Input impedance	Software-selectable: 50 Ω (default) or 1 k Ω

Minimum detectable pulse width	4 ns
Clock requirements	Free-running (continuous) clock

As Sample Clock

Table 4. External Sample Clock Range

Voltage Range (V_{pk-pk})	Sine Wave	Square Wave	
	Frequency Range	Frequency Range	Duty Cycle
0.65 to 5.0	5.5 MHz to 100 MHz	20 kHz to 100 MHz	$f < 50$ MHz: 25% to 75% $f \geq 50$ MHz: 40% to 60%
1.0 to 5.0	3.5 MHz to 100 MHz	—	—
2.0 to 5.0	1.8 MHz to 100 MHz	—	—

As Reference Clock

Frequency range	10 MHz \pm 50 ppm
Voltage range	0.65 V_{pk-pk} to 5.0 V_{pk-pk}
Duty cycle	25% to 75%

STROBE

Connector	DDC
Direction	Input
Destination	Sample clock (acquisition only)
Frequency range	48 MHz to 100 MHz
Duty cycle range ⁸	
$f < 50$ MHz	25% to 75%
$f \geq 50$ MHz	40% to 60%
Minimum detectable pulse width ⁹	4 ns
Voltage thresholds	Refer to <i>Acquisition Timing</i> in the <i>Timing</i> section.

⁸ At the programmed thresholds.

⁹ Required at both acquisition voltage thresholds.

Clock requirements	Free-running (continuous) clock
Input impedance ¹⁰	Software-selectable: 50 k Ω

CLK OUT

Connector	SMB jack
Direction	Output
Sources	1. Sample clock (excluding STROBE) 2. Reference clock (PLL)
Output impedance	50 Ω , nominal
Electrical characteristics	Refer to Generation Timing in the <i>Timing</i> section.
Maximum drive current	
At 1.8 V	8 mA
At 2.5 V	16 mA
At 3.3 V	32 mA
Logic type	Generation logic family setting: 1.8 V, 2.5 V, 3.3 V

DDC CLK OUT

Connector	DDC
Direction	Output
Source ¹¹	Sample clock
Electrical characteristics	Refer to Generation Timing in the <i>Timing</i> section.

Reference Clock (PLL)

Sources ¹²	1. RTSI 7 2. CLK IN (SMB jack connector) 3. None (On Board clock not locked to a reference)
Destination	CLK OUT (SMB jack connector)
Lock time	400 ms, typical

¹⁰ For module assemblies C and later. Module assemblies A and B have an input impedance of 10 k Ω .

¹¹ STROBE cannot be routed to DDC CLK OUT.

¹² The source provides the reference frequency for the PLL.

Frequencies	10 MHz \pm 50 ppm
Duty cycle range	25% to 75%

Waveform

Memory and Scripting

Memory architecture	The PCI-6542 uses Synchronization and Memory Core (SMC) technology in which waveforms and instructions share onboard memory. Parameters such as number of script instructions, maximum number of script instructions, maximum number of waveforms in memory, and number of samples (S) available for waveform storage are flexible and user defined.
---------------------	--

Onboard memory size¹³

1 Mbit/channel	
Acquisition	1 Mbit/channel (4 MBytes total)
Generation	1 Mbit/channel (4 MBytes total)
8 Mbit/channel	
Acquisition	8 Mbit/channel (32 MBytes total)
Generation	8 Mbit/channel (32 MBytes total)
64 Mbit/channel	
Acquisition	64 Mbit/channel (256 MBytes total)
Generation	64 Mbit/channel (256 MBytes total)

Generation

Single waveform mode	Generates a single waveform once, <i>n</i> times, or continuously.
Scripted mode ¹⁴	Generates a simple or complex sequence of waveforms.

¹³ Maximum limit for generation sessions assumes no scripting instructions.

¹⁴ Use scripts to describe the waveforms to be generated, the order in which the waveforms are generated, how many times the waveforms are generated, and how the device responds to Script triggers.

Finite repeat count	1 to 16,777,216
Waveform quantum	Waveform must be an integer multiple of 2 S (samples). ¹⁵

Table 5. Generation Minimum Waveform Size, Samples (S)¹⁶

Configuration	Sample Rate	
	100 MHz	50 MHz
Single waveform	2 S	2 S
Continuous waveform	32 S	16 S
Stepped sequence	128 S	64 S
Burst sequence	512 S	256 S

Acquisition

Minimum record size ¹⁷	1 S
Record quantum	1 record
Total records	2,147,483,647, maximum
Total pre-Reference trigger samples	0 up to full record
Total post-Reference trigger samples	0 up to full record

Triggers

Trigger Types	Sessions	Edge Detection	Level Detection
1. Start	Acquisition and generation	Rising or Falling	—
2. Pause	Acquisition and generation	—	High or Low
3. Script <0..3>	Generation	Rising or Falling	High or Low

¹⁵ Regardless of waveform size, NI-HSDIO allocates waveforms into block sizes of 32 S of physical memory.

¹⁶ Sample rate dependent. Increasing sample rate increases minimum waveform size.

¹⁷ Regardless of waveform size, NI-HSDIO allocates at least 128 bytes for a record.

Trigger Types	Sessions	Edge Detection	Level Detection
4. Reference	Acquisition	Rising or Falling	—
5. Advance	Acquisition	Rising or Falling	—

Sources

1. PFI 0 (SMB jack connector)
2. PFI <1..3> (DDC connector)
3. RTSI <0..7> (RTSI bus)
4. Pattern match (acquisition sessions only)
5. Software (user function call)
6. Disabled (do not wait for a trigger)

Destinations¹⁸

- PFI 0 (SMB jack connector)
PFI <1..3> (DDC connector)
RTSI <0..6> (RTSI bus)

Minimum required trigger pulse width

Generation	30 ns
Acquisition	Acquisition triggers must meet setup and hold time requirements.

Table 6. Trigger Rearm Time

Trigger Operation	Samples, Typical	Samples, Maximum
Start to Reference	57 S	64 S
Start to Advance	138 S	143 S
Reference to Reference	132 S	153 S

Delay from Pause trigger to Pause state¹⁹

Generation sessions	32 Sample clock periods + 150 ns
Acquisition sessions	Data synchronous
Delay from trigger to digital data output	32 Sample clock periods + 160 ns

¹⁸ Each trigger can be routed to any destination except the Pause trigger. The Pause trigger cannot be exported for acquisition sessions.

¹⁹ Use the Data Active event during generation to determine when the PCI-6542 enters the Pause state.

Events

Event Types	Sessions
1. Marker <0..3>	Generation
2. Data Active	Generation
3. Ready for Start	Acquisition and generation
4. Ready for Advance	Acquisition
5. End of Record	Acquisition

Destinations²⁰

1. PFI 0 (SMB jack connector)
2. PFI <1..3> (DDC connector)
3. RTSI <0..6> (RTSI bus)

Marker time resolution (placement)

Markers must be placed at an integer multiple of 2 S (samples).

Miscellaneous

Warm-up time

15 minutes

On Board clock characteristics (valid only when PLL reference source is set to None)

Frequency accuracy

±100 ppm

Temperature stability

±30 ppm

Aging

±5 ppm first year

Power

VDC	Current Draw, Typical	Current Draw, Maximum
+3.3 V	1.6 A	1.8 A
+5 V	1.2 A	1.7 A

²⁰ Except for the Data Active event, each event can be routed to any destination. The Data Active event can be routed only to the PFI channels.

VDC	Current Draw, Typical	Current Draw, Maximum
+12 V	0.25 A	0.4 A
-12 V	0.06 A	0.10 A

Total power 15 W, typical
20.5 W, maximum

Physical Specifications

Dimensions 12.6 cm × 35.5 cm
Weight 410 g (14.5 oz)

I/O Connectors

Label	Connector Type	Description
CLK IN	SMB jack	External Sample clock, external PLL reference input
PFI 0		Events, triggers
CLK OUT		Exported Sample clock, exported Reference clock
DIGITAL DATA & CONTROL	68-pin VHDCI connector	Digital data channels, exported Sample clock, STROBE, events, triggers

Software

Driver Software

Driver support for this device was first available in NI-HSDIO 1.2.

NI-HSDIO is an IVI-compliant driver that allows you to configure, control, and calibrate the PCI-6542. NI-HSDIO provides application programming interfaces for many development environments.

Application Software

NI-HSDIO provides programming interfaces, documentation, and examples for the following application development environments:

- LabVIEW
- LabWindows™/CVI™
- Measurement Studio

- Microsoft Visual C/C++
- .NET (C# and VB.NET)

NI Measurement Automation Explorer

NI Measurement Automation Explorer (MAX) provides interactive configuration and test tools for the PCI-6542. MAX is included on the NI-HSDIO media.

Environment

Note To ensure that the PCI-6542 cools effectively, follow the guidelines in the *Maintain Forced Air Cooling Note to Users* included with the PCI-6542 or available at ni.com/manuals. The PCI-6542 is intended for indoor use only.

Operating temperature	0 °C to 45 °C
Operating relative humidity	10 to 90% relative humidity, noncondensing (meets IEC 60068-2-56)
Storage temperature	-20 °C to 70 °C (meets IEC 60068-2-2)
Storage relative humidity	5 to 95% relative humidity, noncondensing (meets IEC 60068-2-56)
Altitude	0 to 2,000 m above sea level (at 25 °C ambient temperature)
Pollution degree	2

Compliance and Certifications

Safety

This product is designed to meet the requirements of the following electrical equipment safety standards for measurement, control, and laboratory use:

- IEC 61010-1, EN 61010-1
- UL 61010-1, CSA C22.2 No. 61010-1

Note For UL and other safety certifications, refer to the product label or the [Online Product Certification](#) section.

Electromagnetic Compatibility

This product meets the requirements of the following EMC standards for electrical equipment for measurement, control, and laboratory use:

- EN 61326-1 (IEC 61326-1): Class A emissions; Basic immunity
- EN 55011 (CISPR 11): Group 1, Class A emissions
- AS/NZS CISPR 11: Group 1, Class A emissions

- FCC 47 CFR Part 15B: Class A emissions
- ICES-001: Class A emissions

Note For EMC declarations, certifications, and additional information, refer to the [Online Product Certification](#) section.

To meet EMC compliance, the following cautions apply:

Caution The SHC68-C68-D4 shielded cables must be used when operating the PCI-6542.

Caution EMC filler panels must be installed in all empty chassis slots.

CE Compliance

This product meets the essential requirements of applicable European Directives, as follows:

- 2014/35/EU; Low-Voltage Directive (safety)
- 2014/30/EU; Electromagnetic Compatibility Directive (EMC)

Online Product Certification

Refer to the product Declaration of Conformity (DoC) for additional regulatory compliance information. To obtain product certifications and the DoC for this product, visit ni.com/certification, search by model number or product line, and click the appropriate link in the Certification column.

Environmental Management

NI is committed to designing and manufacturing products in an environmentally responsible manner. NI recognizes that eliminating certain hazardous substances from our products is beneficial to the environment and to NI customers.

For additional environmental information, refer to the *Minimize Our Environmental Impact* web page at ni.com/environment. This page contains the environmental regulations and directives with which NI complies, as well as other environmental information not included in this document.

Waste Electrical and Electronic Equipment (WEEE)

EU Customers At the end of the product life cycle, all NI products must be disposed of according to local laws and regulations. For more information about how to recycle NI products in your region, visit ni.com/environment/weee.

电子信息产品污染控制管理办法（中国 RoHS）

中国客户 National Instruments 符合中国电子信息产品中限制使用某些有害物质指令 (RoHS)。关于 National Instruments 中国 RoHS 合规性信息, 请登录 ni.com/environment/rohs_china。(For information about China RoHS compliance, go to ni.com/environment/rohs_china.)

Information is subject to change without notice. Refer to the *NI Trademarks and Logo Guidelines* at ni.com/trademarks for information on NI trademarks. Other product and company names mentioned herein are trademarks or trade names of their respective companies. For patents covering NI products/technology, refer to the appropriate location: **Help»Patents** in your software, the `patents.txt` file on your media, or the *National Instruments Patent Notice* at ni.com/patents. You can find information about end-user license agreements (EULAs) and third-party legal notices in the `readme` file for your NI product. Refer to the *Export Compliance Information* at ni.com/legal/export-compliance for the NI global trade compliance policy and how to obtain relevant HTS codes, ECCNs, and other import/export data. NI MAKES NO EXPRESS OR IMPLIED WARRANTIES AS TO THE ACCURACY OF THE INFORMATION CONTAINED HEREIN AND SHALL NOT BE LIABLE FOR ANY ERRORS. U.S. Government Customers: The data contained in this manual was developed at private expense and is subject to the applicable limited rights and restricted data rights as set forth in FAR 52.227-14, DFAR 252.227-7014, and DFAR 252.227-7015.
