NOTE TO USERS

Ferrite Installation for USB Devices

This guide describes how to install a snap-on noise-suppression device (ferrite) onto interface cables to attain electromagnetic compatibility (EMC). To ensure that National Instruments hardware meets all EMC standards applicable to your country, install the ferrite (included in shipping kit) onto the external USB cable of the NI USB device.

Nationals Instruments hardware should already be installed and the external cables connected. Power off all hardware while installing the ferrite.

To install the ferrite, snap it closed around the interface cable as close as possible to where the interface cable plugs into the National Instruments USB device, as shown in the following illustration. Placing the ferrite elsewhere on the cable reduces its effectiveness.

National Instruments, NI, ni.com, and LabVIEW are trademarks of National Instruments Corporation. Refer to the *Terms of Use* section on ni.com/legal for more information about National Instruments trademarks. Other product and company names mentioned herein are trademarks or trade names of their respective companies. For patents covering National Instruments products/technology, refer to the appropriate location: **Help>Patents** in your software, the `patents.txt` file on your media, or the *National Instruments Patent Notice* at ni.com/patents.
